

# Ashish D'Souza

adsouza@gatech.edu | ashishdsouza.com | (302) 857-0030 | linkedin.com/in/ashish-dsouza | Winter Haven, FL

## EDUCATION

**Georgia Institute of Technology** | Atlanta, GA

May 2022

- Bachelor of Science in *Computer Science* — Major GPA: 4.0
- **Coursework**—OOP, Data Struct. & Algo., Discrete Math, Obj. & Design, Lin. Alg., Multivar Calc., Comp. Org. & Prog., Intro to AI
- **Threads**—Intelligence, Information Internetworks

## EXPERIENCE

**Nead Werx, Inc.** | Atlanta, GA | *Database Developer Intern*

May '20 - August '20

- Worked remotely with database team on Nead Werx product, MerchLogix, due to COVID-19 outbreak
- Developed functional transcription software database for sample insurance company using PostgreSQL and Perl

**Optical Science Center for Applied Research** | Dover, DE | *Software Engineering Intern*

Jun '17 - Jun '19

- Constructed an autonomous aerial greenhouse gas data collection module with Arduino
- Retrieved and analyzed satellite data with TensorFlow ML framework and Selenium

## PROJECTS

**TimeLock** | <https://github.com/computer-geek64/timelock>

May '20

- TimeLock is a database-oriented implementation of the theoretical concept of time-lock encryption, using RSA 2048-bit encryption
- Built the REST API to perform protected CRUD operations on the database, and the client CLI program to interface with the API
- **Software:** Java, Spring Boot, PostgreSQL, Maven, Java Persistence API (JPA)

**COVID-19 Survival Calculator** | <https://github.com/computer-geek64/covid19-survival-calculator>

Mar '20

- A web application that allows users with coronavirus to calculate the probability of their survival
- Programmed the back-end REST API and developed the user demographics database system. Also web scraped for and ran data analysis on live COVID-19 datasets, and helped devise the gradient boosting machine learning models.
- **Software:** Python, Django, Jinja, PostgreSQL, Pandas, XGBoost, LightGBM, Ruby, Nokogiri, JavaScript, HTML/CSS

**ALRT (Automated Life Rescue Tracker)** | <https://github.com/computer-geek64/alrt>

Feb '20

- ALRT is a multi-platform application that passively collects and stores location data to help first responders of natural disasters locate missing persons after conditions cause power/connection loss, while web scraping public databases for live disaster data.
- Developed the back-end API and managed a database cluster. Also designed the predictive location algorithm and web scraper.
- **Software:** Python, Flask, MongoDB, Selenium, TensorFlow, JavaScript, Firebase, React Native, ReactJS

**Firestorm** | <https://github.com/computer-geek64/firestorm>

Dec '18 - Present

- Created and maintained a personal server running a custom version of CentOS 8 for secure file sharing/centralization, remote code development, penetration testing, password/secret management, media streaming, and gaming.
- Built a private projects codebase using Git VCS and backed by a PostgreSQL database system, accessible through the web interface
- **Software:** Python, Flask, Jinja, PostgreSQL, SQLite, HTML/CSS, JavaScript, Apache, CentOS 8

**MileSnap** | *PDI Winning Project at HackGT* | <https://devpost.com/software/hackgt6-g74o8p>

Oct '19

- A cross-platform app that allows users to take a picture of a gas station sign and receive fuel type and price
- Devised an image post-processing spatial algorithm to extract fuel data, and an image pre-processing bilateral blur algorithm
- Implemented the back-end API that leveraged a variety of cloud services, including AWS S3 Bucket, Google Cloud OCR, Azure CV
- **Software:** Python, Flask, OpenCV, AWS S3 Bucket, Google Cloud OCR, Azure Computer Vision, JavaScript, React Native

## AWARDS

- HackGT 6 Hackathon - *PDI Award for MileSnap Project* (2019)
- SkillsUSA Computer Programming - *National Gold Medalist* (2018), *4x State Gold Medalist* (2015-19)
- Regional Multi-state Science Fair - *First Place* (2018), *Third Place* (2017)

## SKILLS

- **Programming Languages:** Java, Python, Ruby, Bash, Perl, SQL, JavaScript, HTML/CSS, PHP, R
- **Frameworks:** Django, Flask, Jinja, TensorFlow, Pandas, Spring Boot, Rails, Selenium, SocketIO, OpenCV, Nokogiri, JavaFX & Swing
- **Software:** LAMP, Android Studio, Arduino, Git, Maven, LUKS, AWS S3, Google Cloud OCR, Azure Computer Vision
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite, MariaDB, JSON
- **Operating Systems:** Linux (Arch, Fedora, Debian, CentOS, Kali, Qubes OS, Raspbian, Ubuntu), Windows, OS X
